Subject: PROJECT 3020338

To Whom It May Concern:

I am writing in response to the MUP application for project #3020338. I am a neighbor -- my property shares a border with the City People's property -- so this project will directly affect me. In addition, I am a gardener with a P-Patch in the shadow of Mad-P. Furthermore, my children attend The Valley School. Madison Valley is my home, and this project will dramatically affect it. I have concerns about a number of areas and ask that you withhold the permits for this project until the following concerns are adequately addressed.

Madison Valley includes both a commercial center (located on Madison) and a residential zone (all around Madison, for many blocks. The proposed development has the massive scale that is probably appropriate for the commercial portion of Madison Valley. Unfortunately, the development extends well into the residential portion of the neighborhood, and where it does, it's out of scale and will harm the residential character of the neighborhood. Specifically:

Trees: The new Comprehensive Plan, Seattle 2035, states "Seattle's trees, vegetation, and soils make up a vitally important system that manages water runoff, cleans the air, mitigates greenhouse gas emissions and impacts, improves human health, and reduces the heat island effect. This natural system also provides wildlife habitats, supports livable neighborhoods, and is integral to the essential character of the Emerald City." One goal of the Comprehensive Plan 2035 is to seek to increase the amount of permeable surface by reducing hardscape surfaces; another goal is to promote the care and retention of trees and groups of trees that enhance Seattle's historical, cultural, recreational, environmental, and aesthetic character.

In contrast, this development will completely remove a healthy urban forest that presently contains a thriving and sustainable mix of tree, and which currently creates a contiguous and healthy ecosystem that provides habitat to many species. In its place will be a massive structure, built out to a degree that will not leave room for replacement of a similar canopy of trees of mixed sizes.

A grove of trees, exceptional and deserving of protection under Director's Rule 16-2008, has been identified on this hillside. The developer's logic that because the development will destroy the trees this puts them 'at risk' and because they are 'at risk' they can therefore be removed, is circular and makes a mockery of Seattle's claim to be a green city.

Traffic: The traffic study that the developer commissioned did not take an actual count of the current traffic. Instead they seriously overestimated the current traffic. This in turn makes the increase in traffic from the proposed supermarket appear significantly less than it will likely be. They also failed to provide a count of delivery traffic from a comparable supermarket. These are both numbers that can be obtained. This is a complicated site, with limited space for truck deliveries. The developer must provide a valid traffic study and then offer a safe, workable plan for the significant increase in traffic that this high-impact, destination supermarket will create.

An entrance on Dewey is seriously out of scale for Dewey. Dewey is a narrow street, often used as a walkway for the neighborhood. A residents' entrance would significantly disrupt the quiet residential neighborhood streets between Madison and Dewey, changing the character of the neighborhood, yet providing little reduction in volume on Madison. Please keep one access, on Madison.

Height: This building is too big as currently planned. It will stand 75 feet tall, directly across the narrow (18 foot wide) street of Dewey, facing one- and two-story homes. There is no transition between the commercial and residential

zones, and the natural buffer currently provided by the trees is being removed. The proposed structure is 300-feet long. Looming from atop the hillside, it will dominate the valley floor below. It is a solid mass that will cast a wide shadow on the neighborhood. The enormous mass is out of proportion for the area.

The project is being built on a critical slope. Rather than following the topography, or using the topography to inform the design, the project obliterates the slope. The proposed development is not in alignment with Seattle Design Guidelines CS2-B.1, CS2-C.2, CS2-D.11, CS2.D.4, CS1-C, CS2-B, CS2-D.3, and CS2-D.4.

Water management. Our neighborhood has a history of flooding, including a loss of life in 2006. Even since that time, and following the addition of the retention pond, we still have periodic flooding and some homes in the area have problems with periodic flooding basements. An articulated plan explaining how storm water and wastewater will be managed has not been offered. Please don't permit this project until there is a clear plan for the removal of water that does not further burden our current combined sewer system.

Please seriously reconsider this project before issuing permits. Our neighborhood deserves better.

Respectfully submitted,
Shane Burnett
