PROJECT 3020338-LU

October 21, 2019

Dear Mr Mills

The shadow study memo, signed by Sean Dugan, appears to assume nobody in general, and the SDCI in particular, will read it.

How else can one justify so absurd a proposition as that a concrete wall allows in as much light as trees with no leaves?

These shadow study results can be construed as little more than a cynical disregard of your intelligence, and/or character.

Or a cravenly dishonest mockery of fact.

Please demand from Velmeir a bonafide study of the impact of the loss of sunlight on the P Patch and the neighboring park, Mercer Madison Woods.

Please do not permit Velmeir's power and money to distract you from ethical or responsible behavior.

Or from the charge which your job mandates, - i.e. to uphold the Codes and Guidelines of your own Department.

I am not sure what to say about the water runoff and drainage study, as I got lost in the numbers and technicalities. But if it is as patently illogical as the shadow memo, I urge you to reject the 'findings', and send Velmeir back to the drawing boards.

It is depressing enough to watch our once beautiful and very livable city neighborhoods fall prey to the lifeless greed of the developers wrecking ball.

It is another thing altogether to feel that, as a citizen, nobody at City Hall has our back.

Please demonstrate that I am mistaken.

Respectfully,
Jane Nichols
Madrona
