Subject: Comments on Land Use Application - Project: 3020114, Bulletin date: 03/03/2016

I am concerned that this project is collecting all storm water and putting it into the current system which is combined storm/sewer. There is already flooding in the areas downhill from this site to the east, particularly on Dayton. I believe that they should be required to mitigate storm water. A green roof is helpful but is not capable of absorbing all the rainwater during the heavy rain season.
